SECTION I. POPULATION AND VITAL STATISTICS

Population estimates are obtained by taking into account statistics of population increase in conjunction with the results of population censuses. For Australia as a whole, statistics of population increase take account of natural increase and net overseas migration.

The estimated population in each State or Territory represents the population ascertained at the Census plus recording natural increase and recorded negliar from overseas migration for that State or Territory; gains and corresponding losses that result from movements between States and Territories are also taken into account into fairs at bey are recorded as transfers of Stated residues under child endowment procedures or Commonwealth electron procedures supplemented by results of any special count or sample survey. Holiday, business or other similar abort-term movements between States and Territories are omitted, as records of migration by State or Territory are not complete, the estimated States and Territory propulsions of otherwise days proprinting and are subject to revision.

As a consequence of the omission of holiday, business or other similar short-term movement between States and Territorist the marked easenani movements in the population of some States due to include boilday movements are not reflected in the estimates since June 1961. However, the following two supects of seasonal movements are reflected in the estimated populations of the States.

- (i) People who were on holiday or other short-term travel interstate at the time of the Census are counted in the State where they spent Census night.
- (ii) There is some scassnal movement in the population of Australia as a whole which is due to movements of tourists and other visitors from overseas and of Australians travelling overseas for short neriods.

The results of the 1966 Census have been taken into account in the preparation of these population estimates in issues prior to that for March quarter 1968 (No. 267), as well as the census populations at 30 June 1966 shown in Census publications, exclude particulars of full-blood Aborisines as required by Section 127 of the Constitution prior to its repeal in 1967.

Vital statistics for periods prior to 1967 exclude full-blood Aborigines. Differences between the statistics now published and those formerly published which implied the exclusion of Aboriginal vital events, cannot be taken as reliable statistics of births, deaths or marriages among full-blood Aborigines, because in many areas no satisfactory administrative or other basis existed for distinguishing vital events among full-blood Aborigines from those among part-Aborigines or the rest of the population.

SECTION V. CAPITAL EXPENDITURE BY PRIVATE BUSINESSES

These statistics are designed primarily to measure trends in expenditure by private businesses on fixed tangible assets. The statistics are based on returns obtained from private businesses subject to pay-old and (other than businesses in trust, professional, gas and electricity industries), from grower to the statistics, and from other businesses not subject to pay-old tax which undertake projects from each at 500,000 in any half year. For statistics of capital expenditure by all private businesses, are the series 'Gross fixed capital expenditure' on page 93 of this publication.

COMMONWEALTH SALES TAX-SALES OF GOODS AND TAX PAYABLE

An indication of fluctuations in the value of wholesale trade is given by the returns made under the Sate Tax Acts. With certain specified exemptions, all goods soled by wholesale in Australia, incuding imports are trashle. The returns do not relate to all wholesale trade, as vendons trading only in exempt goods are not required to farmin furturns. They do not necessarily cover a constant proportion of all frade. The effects of legals—ton and administrative changes on the recorded values of azable and exempt goods respectively the properties of t

(a) In addition, special benefit psyments to migrants in Commonwealth centers or housts, available their placement in employment in Austria were 1964-6-5, 23,300, 1965-6-6, 85,000, 1966-7-6, 122,000, 1994-6-8, 128,000, 1968-6-9, 233,000; quarter ended March 1970, 885,000. (b) From June 1968, special benefits became payable to confinement cases in less of actions or unemployment benefits.

 NOTE. The rates of benefit per week from 29 September 1969 are \$10 for a married person or an unmarried adult, plus \$7 for dependent spouse, \$2.50 for the first child under 16 years of age and \$3.50 for each subsequent child under 16 years; for unmarried juveniles \$4.50 if under 18 years and \$6 if 18 and under 21 years. In certain cases \$7 per week might be paid in respect of claimant's housekeeper. Permissible weekly income from other sources is \$6 for adults and married persons and \$3 for unmarried persons under 21. For unemployment benefit, permissible income means income of claimant and spouse; for sickness benefit, permissible income means income of claimant only. There is a waiting period of seven days for which no payment is made. A special ordinary benefit (See above) may be granted to a person not qualified for an unemployment or sickness benefit if, because of age, physical or mental disability or domestic circumstances, or for any other reason, he is unable to earn a sufficient livelihood for himself and his dependants.

Quarterly figures are affected by seasonal influences. Comparisons as to trend are generally best made by relating complete years or corresponding periods of incomplete years. However, from December quarter 1963, comparisons with corresponding quarters of earlier years are affected by additional prepayments arising from extensions of annual leave from two to three weeks. Indexes of average weekly earnings, seasonally adjusted, are shown in the next table. There has been no change in the basis of seasonal adjustment of these series. They have not yet been adjusted by the programs used for other Bureau series, as described in 'Seasonally Adjusted Indicators, 1970', issued in June 1970.

INDEXES OF WAGE RATES AND HOURS OF WORK

The indexes of weighted average minimum weekly and hourly wage rates and standard hours of work shown on this and the following two pages are based, in the main, on the occupation structure existing in 1944.

1934. Each of the occupations included in the indexes is individually weighted. From the wage rates and bours of work for these occupations, weighted averages are calculated for each industry and for all groups. In the following tables the weighted averages so calculated are shown in dollars and cents and also

as index numbers with the weighted average for the year 1954 as base (= 100).

For details of wage rates and index numbers from 1939 references had been added to the following solucins: Minatum Wage Rates, March 1939 to Jane 1965 (ref. No. 6. 17), Wage Rates Indexes, June 1965 to Jane 1968 (ref. No. 6. 21). Figures for months subsequent to June 1968 will be found in the monthly bulletins, Wage Rates and Earnbay teft, No. 6. 10, commencing with the June 1996 issue.

WEEKLY WAGE RATES(a): ALL GROUTS

Indexes of weighted average minimum weekly rates payable for a full week's work (excluding overtime), as prescribed in awards, determinations and agreements, and index numbers of wage rates.

WHOLESALE PRICE (BASIC MATERIALS AND FOODSTUFFS) INDEX

The weighting system adopted in this index is based on estimates of the average annual consumption of included commodifies in Australia in 1928—29 to 1934-35. The validity of the weighting and the representativeness of the index have become increasingly affected by a structure. Now series of wholesale price index numbers relating to materials used and an industrial structure. Now series of wholesale price index numbers relating to materials used to be defined across of the economy are being developed. The first of these indexes, referring to materials used in building other than house building, save published in statistical buildin (see No. 9, 30 of 23 April 1969 (see also pages 145 and 146). Work continues on the preparation of two further measures, relating the materials used in house building and in manufacturing industry respectively. Taken together these first three series will, to a considerable extent, constitute a currently representative replacement for the Wholeston of the constitution of the production of the pr

Commodities in the Wholesale Price (Basic Materials and Foodstuffs) Index are priced in their primary or basic form wherever possible. The prices used have, in the main, been obtained directly from manufacturers and merchants.

⁽a) Figures are shown to one decimal place to avoid distortions that would occur in rounding off the index numbers to the nearest whole number. (b) The whole of the group Electrical Insulation Materials and the majority of the Items in the group Mechanical Service Components are based on Syders and Melbourse price series. (c) The indicator used for this group is the Wholesale Price Index of Electrical Insulation Materials which was issued quarterly up to February 1999, when mostly complatation was commenced.

FARM PRODUCTION PRICE INDEXES

The annual indexes shown in the following table relate to average 'prices' of farm products realised in the priorigal market of Australia. The 'price' data used are average unit values for the foot quantities of the relevant commodities produced or marketed in each year and the indexes 'be-refere measure both the effects of changes in prices (as such) and of variations in the quality, type, usage, rice, of products marketed. The indexes for any year relate to the average values of farm products produced or marketed in that year.

The indexes shown below are the revised series (December 1952) in which average quantities of each product marketed in the period 1946-47 to 1950-51 have been used as fixed **oights.

(Base: average of 3 years ended June 1939 = 100)
